DAYLIGHT

Daylight chair sets new aesthetic and ecological standards for premium high density, multi-purpose stacking seating. The mesh seat and back conforms to the body, prevents pressure points from forming and provides a cool, comfortable sit. A combination of torsion bar frame and flexible resin back allows the chair to move with the user. The chair also features integral linking glides. The seat mesh is available in black, light grey and white. The steel frame is available in a durable silver powder coat finish or a chrome option is also available. The Daylight chair weighs only 3.8kg ensuring easy stacking and transport on its dolly and features flexible mesh. Stackable up to 45 units high (on its dolly), Daylight features 'stacking stoppers' preventing friction damage. The design is completely ecologically friendly, constructed from recycled and recyclable material.

FINISHES AND COLOURS

Mesh seat and back finishes with chrome or silver powdercoat base.
